 meet your baby's needs
 New name
 Improved formula

Nutramigen PURAMINO is
 a food for special medical
 purposes and must be
 used on the advice of a
 healthcare professional

www.nutramigen.co.uk

Nutramigen AA is now Nutramigen PURAMINO

**NEW NAME, SAME TRUSTED PROTEIN
 CONTENT WITH AN IMPROVED FAT BLEND.**

Nutramigen PURAMINO has been recommended for your
 baby because...

Nutramigen PURAMINO is an amino acid-based hypoallergenic
 formula specially designed for infants and young children with
 severe cow's milk allergy (CMA), multiple food intolerance or
 for other indications requiring an elemental diet.

CMA is caused when the immune system 'over reacts' to the
 protein found in cow's milk and dairy products. Protein is made
 up of long chains of amino acids. Nutramigen PURAMINO
 is made up of individual amino acids, the building blocks of
 protein, that are not recognised by the immune system and
 cannot trigger an allergic reaction.

Routine infant formula

Nutramigen PURAMINO

NUTRAMIGEN PURAMINO IMPROVED FAT BLEND

The gut is a natural barrier against food allergens
 but this can be disrupted in infants with cow's milk
 allergy. Medium Chain Triglyceride (MCT) oil has been
 added to Nutramigen PURAMINO to provide a more
 readily available source of fats and energy for infants
 with fat malabsorption.

IMPORTANT NOTICE: Breast milk is the best nutrition for babies.

The decision to discontinue breastfeeding may be difficult to reverse and the introduction of partial bottle-feeding may reduce breast milk supply. Failure to follow preparation instructions carefully may be harmful to your baby's health. Parents should always be advised by an independent healthcare professional regarding infant feeding. Products of Mead Johnson must be used under medical supervision.

CONTINUED SUPPORT FOR PARENTS, HELPS TO GIVE YOUR BABY A GOOD START IN LIFE

Nutramigen PURAMINO

- Is suitable from birth. It is nutritionally complete and has all of the essential vitamins and nutrients babies need for growth and development
- Can be used as part of a varied diet for older infants 6 months and over. This may be helpful as it provides a source of calcium in a dairy-free diet[†]
- Contains the recommended DHA (omega-3) level to support normal visual development in children up to 12 months of age, with a daily intake of 100mg

We have a series of parent booklets available which provide advice on giving your child a healthy milk-free diet. These cover all stages from diagnosis, weaning and feeding tips for toddlers and include a variety of milk-free recipes. Ask your healthcare professional for copies or contact the Mead Johnson Careline.
